

Shatter Proof

SHATTER PROOF

Duni's Shatter Proof range is an elegant collection of shiny, thick and extremely durable glasses. The Shatter Proof glasses are made of polycarbonate plastics which will not shatter – regardless of how they are handled. This makes the range perfectly suitable for areas where real glass is too much of a safety risk, such as spa and pool areas, cruise ships, sport events, outdoor terraces and many other places.

Duni's Shatter Proof range is much lighter than regular glass, making handling easier for your staff. These glasses can be washed in a professional dishwasher up to 2500 times; giving them a much longer life span than regular glass, which also gives an economical benefit.

POLYCARBONATE (PC) -30°C to + 120°C

Polycarbonate is clear, very strong plastics with supreme finish. It is the hardest plastic in Duni's assortment and looks more like real glass than any of our other plastics. With its temperature span of -30 to +120, polycarbonate can be dishwasher, microwaved and put in a freezer.

Product will not shatter and is safe to use in any environment.

Product can be washed in a dishwasher.

Product can be heated in a microwave oven.
